

Veterinary Cardiology

moments matter

Standing Up To Heart Disease

Studies show that cardiac patients live 75% longer when co-managed between a primary care veterinarian and a board-certified cardiologist. Our veterinary cardiologists will work closely with your family veterinarian to come up with a cardiology treatment plan to manage your pet's condition.

Why BBVSH?

Comprehensive cardiac care by a board-certified Cardiologist

- Echocardiogram imaging
- Diagnostic ECG analysis
- 24-48 Hour Holter Monitoring and analysis
- Radiograph Interpretation
- Pacemaker programming and troubleshooting
- Medication recommendations
- Patient Follow-Ups

Non-Invasive Cardiology procedures

- Minimally invasive Pacemaker Placement
- Minimally Invasive Intravascular PDA Occlusion
- Minimally Invasive Balloon Valvuloplasty
- Included recheck exams post-op

You have a Cardiologist on your side

Cardiology specialists keep abreast of the most current diagnostic and therapeutic options and will be a continued resource for you and your pet beyond the initial consult. Continued communication with your primary care veterinarian after initial examination.

How to Proceed

①

Request a referral

Reach out to your primary care veterinarian to submit an online referral to our Cardiology Service. This will ensure the proper transfer of vital medical information for your pet.

②

Book the appointment

All referrals undergo a review process by our cardiologist before you are contacted by our client service representative to schedule in for an appointment.

③

Come in for a consult

All of our initial consultations will include a physical examination, diagnostic ECG, and echocardiogram imaging with interpretation. After these have been completed, you will have a conversation with a member of the cardiology team regarding treatment recommendations for your pet.
