Care That Goes Deep

Reaching a diagnosis and caring for a sick pet can be scary, frustrating and confusing. Our Internal Medicine Specialists are dedicated to allaying fears and helping clients to make sense of their pet's options and ongoing care.

Why BBVSH?

Experience with difficult cases

Board-certified internists perform advanced diagnostics and therapeutics for patients who are not easily diagnosed, that do not respond to standard treatments or have multiple disorders.

Specialized and minimally invasive diagnostics

Our internists utilize endoscopic cameras to look inside your pet and find out what is wrong. Also at their disposal is a CT scanner!

Team approach

Our internist works closely with other on-site specialists in critical care, surgery, radiology, oncology, cardiology and neurology to provide timely, collaborative, seamless care.

How to Proceed

①

Request a referral

Ask your primary care veterinarian for a referral to our Internal Medicine department. This ensures the proper transfer of vital medical information.

②

Book the appointment

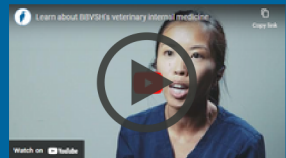

You will receive a phone call from one of our client service representatives to schedule your initial consult.

③

Come in for a consult

Your internist will discuss your pet's case with you, and then present to you their recommended course of action.
