

Veterinary Neurology

moments matter

Back To Their Old Selves

Our neurology department utilizes specialized imaging with a 64-slice CT scanner and a high-field 1.5T MRI to provide your pet with an accurate diagnosis and to help determine the most appropriate treatment. The goal? To get their quality of life back to normal.

Why BBVSH?

Two Board-certified Neurologists

Dr. Gordon, DVM, DACVIM (Neurology) and Dr. Adam Drury, DVM, DACVIM (Neurology) have more than 24 years of combined experience.

Staffed 24 / 7

The ER and ICU are overseen by board-certified criticalists and staffed with ER vets, Registered Veterinary Technicians and Veterinary Assistants, who have been trained by our board-certified neurologists to help with incoming neurological emergencies and support post-operative patients around the clock.

Neurology and Neurosurgery

We specialize in both medical and surgical diseases, including spinal surgery, seizure activity, movement disorders, brain cancer, weakness, paralysis, lameness and pain.

How to Proceed

①

Request a referral

Ask your primary care veterinarian for a referral to our Neurology department. This ensures the proper transfer of vital medical information.

②

Book the appointment

You will receive a phone call from one of our client service representatives to schedule your initial consult as soon as possible.

③

Come in for a consult

You and the neurologist will discuss your pet's case and what the best course of action for them and yourself would be. You will also be presented with a detailed estimate of any diagnostics or procedures recommended before proceeding any further.
